BioSystems 40 (1997) 1

Introduction

This Special Issue contains 25 papers presented at the International Workshop on *Neuronal Coding* which was held in Prague, Czech Republic, on 11–14 September, 1995. These papers describe neuronal coding and related problems from diverse points of view and a glance at the List of Contents shows that the authors fulfilled the intention of the organizers in bringing together a representative cross-section of scientists with a common interest in theoretical, experimental, modeling or computational approaches to the problem of neuronal coding.

The workshop was organized by the Center for Theoretical Study which is the joint institute for

advanced studies at Charles University and the Academy of Sciences of the Czech Republic. The workshop was made possible with the help of generous financial support from the Simons Foundation, Canada and the Office of Naval Research, European Office. We are also very grateful to the staff of the Congress Center of the Czech Medical Society for their help with the organization of the meeting.
